

Short statement

Decentralised Access to European
Microdata

Kloster Johannisberg, June, 2010

Stefan Bender

Data and Metadata

- **Linked data of all kind of sources, more complex (metadata, training)**
- **Surveys will no longer play the key role (admin data, tax data, transaction data)**
- **Metadata very important (standard)**

Researcher's role

- **Need for a voice of researchers (German Data Forum)**
- **Researchers should be “more cooperative” (no feedback loops, thinking of their own research).**

Data access and dissemination

- **More knowledge how to use sensitive data on researcher's side**
- **Interdisciplinary discussion on disclosure risk**
- **New ideas of data access (imputation, RDC in RDC, on the way to an International Remote Access)**

- **Strong need for a broad international network of**
 - Researchers, Data Archives, National Statistical Institutes
 - International Institutions (Eurostat, OECD)
- **Strong need for a (international) division of work (DwB)**
- **Strong need for an information exchange**
- **Access Process will go on!!!!**
